External Release Notes – 7/19/23

ESO Insights for Fire Properties & Inspections

The ESO Insights team is excited to announce that Insights for Fire Properties & Inspections has started customer enablement today. This is the second app of the ESO Fire RMS Suite to now be available in Insights. The release includes not only a full exploratory data model for Inspections + Properties/Buildings/Occupants (PBO), but it also includes nine SME-designed Global Dashboards.

Enablement will continue over the next 2-3 weeks and when your agency has been enabled, you will receive a notification in the ESO Suite dashboard, and an email announcement will arrive in your inbox.

Below is a catalog of the Global Dashboards that have been released, along with a brief description.

Area of Focus	Dashboard Name	Summary
Inspections	List of Inspections	This is the "main" Inspections Dashboard, which shows the full list of parent inspections within an agency across all statuses. At a glance, it gives users a view of how many inspections were, or are being, carried out across a certain period across all inspection types and PBOs
Inspections	Violations by Property	This Dashboard focuses on individual instances of a firecode (Inspection Firecode ID) and displays firecodes that have a violation. The list view contextualizes the violated firecodes against a Property, a Building and an Occupant. The bar chart shows a month by month average trend of past violations to highlight any seasonal trends.
Inspections	List of Reinspections	The reinspections Dashboard only shows inspections that were generated as a result of a prior inspection - for example, where a violation was found and the occupant was asked to remediate.
Inspections	Inspection Fee Report	This Dashboard displays Inspection Fees (either for original inspections or for reinspections, depending on the agency).
Properties, Building, Occupants	List of Properties	Dashboard displays all properties, with filters allowing users to further filter down the results of their properties by Zones, Battalions
Properties, Building, Occupants	List of Buildings	Dashboard displays all buildings, with filters allowing users to further filter down the results of their buildings by Division, Battalions, etc.
Properties, Building, Occupants	List of Occupants	Dashboard displays all occupants, with filters allowing users to further filter down the results of their Occupants by Division, Station, etc.
Properties, Building, Occupants	Occupant Chemical Presence	This Dashboard gives agencies a high level summary view of chemical data as it relates to Properties/Buildings/Occupants. It should give users an idea of what chemicals are present across the data within their agency to allow them to create better pre-

		incident plans. Users can filter using the dashboard to drill down lower into the data, with the benefit of being able to see the full P/B/O hierarchy as it relates to any given Chemical Instance
Properties, Building, Occupants	Occupant Tank Report	This Dashboard gives agencies a high level summary of tanks present as they relate to Properties/Buildings/Occupants. This gives users details of Tanks as they relate to an Occupant, while also rolling up this data to a Property level, so that a user can see all tanks present on a Property across all of the linked Occupancies.
