

## External Release Notes – Insights Data Exporter (7/31/23)

Last week, the Insights team released an update to the Data Exporter, which increases the limit on source tables for exports from 5 to 10 tables. Effective immediately, these are the current limits on source data being exported with the Data Exporter:

1. Maximum 200 source columns,
2. Maximum of 10 source tables, and
3. Maximum of 3 million rows

**Note:** The Data Exporter is an add-on feature for Insights that is distinct from the ability to export data from an Insights widget inside of a Dashboard. If you are interested in learning more about the Data Exporter, contact your account manager for further details.
