# ESO Fire Release

March 31, 2016

Updated Landing Page

You will now see an improved landing page when you log into ESO Fire. The new features include:

- New columns added for easier searching and viewing incidents of incidents:
  - "Type"
  - "Shift"
  - "Units Responded"
- Removal of columns: "Number of Units" and "Attachments".
- New color-coding of icon for complete/incomplete reports.

ESO's Mission

Improve the health of communities through the power of data.

Mutual Aid Changes

We have created an optional validation rule to require the input of the mutual aid given/received department.

The rule is as follows:

- If the "Aid Given or Received" field is entered as "(1) Mutual Aid Received" or "(2) Automatic Aid Received", then "**Aiding Agencies**" field will be required.
- If the "Aid Given or Received" field is entered as "(3) Mutual Aid Given" or "(4) Automatic Aid Given", then "**Aided Agencies**" field will be required.

ESO's Mission

Improve the health of communities through the power of data.

New Fields in Basic 2 tab for Apparatus

Three new fields have been added to help in calculating response time. Each field can be configured separately to be a mandatory validation by your agency.

New fields include:
- "Priority"
- "Reason for Delay"
- "Responding From"

These fields are also collected in EHR and are included in the transfer of the patient care report to further reduce report-writing time and increase accuracy.

Database Changes

To shorten import time for larger agencies, we have removed the limit of 100 records from the manual and auto import.
